The Rigel Plaster-in Wide is an easy to install plaster-in extrusion profile which benefits from having a push on polycarbonate diffuser. It effectively conceals the LED tape and gives a softer lighting effect. Designed to be plastered into the ceiling or wall during the early stages of a build, allowing the LED tape to be fitted later. The wide channel on the extrusion allows for two strips of tape to be installed into the extrusion. Also available in non wide option. Silver anodised & opal pc
Constructed from aluminium alloy & polycarbonate
